PROFESSIONAL SUMMARY

Systems Engineer specializing in software development with experience building scalable web and mobile applications. Expert in designing modern interfaces (React, Next.js, Tailwind) and implementing robust backend architectures (Node.js, Express, PostgreSQL, AWS). Strong problem-solving skills for complex technical challenges and end-to-end solution deployment. Daily workflow optimized through Linux/Ubuntu environments and the integration of AI tools for boilerplate automation, maintaining strict control over core architecture.

EDUCATION

B.S. in Systems Engineering

- Graduated: February 2026 • Universidad Simón Bolívar

Multimedia Design and Integration Technician

- Graduated: November 2020 • SENA
-

PROFESSIONAL EXPERIENCE

Tidelit Unity SAS | Software Developer

Jul 2025 - Dec 2025

- Led the development of a music streaming platform MVP, consuming complex RESTful APIs (PHP) to manage authentication and critical data flows.
- Resolved critical performance crashes (memory overflow) by refactoring the global state with Zustand, achieving a radical improvement in app retention and stability for its public launch.
- Structured the ecosystem under the MVC pattern and ensured timely sprint deliveries using agile methodologies (Scrum / Kanban).

Rad Biz Consultants | Full-Stack Developer (Web/Mobile)

Jan 2025 - May 2025

- Developed and scaled an international automotive SaaS platform using Flutter, ensuring real-time database synchronization via Firebase.
- Managed the architecture of dynamic scheduling modules and interactive dashboards, optimizing data query latency.
- Significantly reduced technical debt by documenting rendering processes and implementing efficient infrastructure integrations.

NOTABLE PROJECTS

- GoCoink (Fintech Mobile App): Offline-first application built with React Native and TypeScript for customizable financial balance management. Architected with SQLite for 100% local persistence and data protection, integrating a dynamic cycle engine (monthly, bi-weekly, independent) and advanced cache optimization, delivering a fast, private, and minimalist user experience.
 - CMS Editorial Panel (Supabase): Architecture and development of a dynamic web blogging platform tailored for the fashion industry, implementing a custom drag-and-drop administration panel. Leveraged Supabase as a Backend-as-a-Service for efficient relational database management and secure user authentication.
-

TECHNICAL SKILLS

- Languages & Frontend: React, React Native, Flutter (Dart), Next.js, Expo, Astro, TypeScript, JavaScript (ES6+), Java, Python, PHP, HTML5, CSS3, Tailwind CSS, Three.js.
- Backend & Databases: Node.js, Express, SQL, NoSQL, Power BI, (complex queries, migrations).
- Infrastructure & DevOps: AWS (S3, EC2, RDS, IAM), Ubuntu/Linux, Docker, Git/GitHub.
- Workflow: Scalable architecture, performance optimization, integration of AI assistants for boilerplate automation and development efficiency.
